SPEEDSTAR SS-25 SP

truck-mounted
rotary drill

- Versatile deep drilling rig, ideally suited for large diameter water wells, slim hole oil and gas wells, and mineral exploration.
- Goes to depths of 4500 feet (1372 m) using 2 1/4 inch (73 mm) drill pipe, depending on formation conditions. Larger diameter holes to shallower depths.
- Moves in quickly, moves on sooner with convenient truck mounting.
- Dual engines. Truck engine operates mud pump through the PTO. Deck engine operates rotary table and drawworks assembly.
- Provides more effective braking in deep hole trips . . . better control of heavy tool strings with optional hydromatic brake — increases braking capacity of drawworks.
- Non-productive operations go faster — need to "rathole" when adding pipe is eliminated by channel-guided swivel that automatically retracts kelly bar to back of derrick.
- Smooth power flow . . . wide range of drilling and hoisting speeds furnished by heavy-duty torque converter and 5-speed power-shift transmission.
- Convenient operator's controls — grouped at left-rear corner of machine . . . easy to reach from driller's station.

**strong on
performance**
